May 2018

Dear Colleagues:

The scope of the American Thoracic Society is amazingly broad – covering pulmonary, critical care, and sleep medicine. The challenge that we face each year as we put the International Conference program together is that some clinical topics that may be of central importance to our members, conference attendees, and patients may not be prominently featured in the program. This is especially the case with some rare lung diseases.

With each challenge though, comes opportunity. Because of the wealth of scientific and clinical information presented at ATS 2018, these diseases, though uncommon, will be the focus of many presentations over the next several days. The purpose of this Rare Lung Disease Guide is to help you more easily find these presentations.

In his chapter on rare lung diseases in “Breathing in America: Diseases, Progress, and Hope” (2010) Francis X. McCormack, MD noted that research on uncommon respiratory diseases has produced some of the most exciting discoveries in pulmonary medicine, stating that “Insights gained from uncommon lung diseases often shed light on the more common ones.”

The definition of a rare disease by its prevalence varies by country. A disease or disorder is defined as rare in the United States when it affects fewer than 200,000 Americans at any given time. This guide was compiled by a small group of ATS Members who studied the ATS 2018 abstracts – authors requested to be considered for inclusion. Many thanks to Dr. Frank McCormack, Dr. Lisa Young, Dr. Jonathan Kropski, Dr. Nishant Gupta, and Mr. Jack Kelly for their assistance with this resource.

There are a number of patient advocacy groups that are exhibiting at ATS 2018. In addition to attending the presentations noted within, I encourage you to visit with them to learn more about these rare conditions. Groups listed in **bold** are members of the ATS Public Advisory Roundtable and can all be found in PAR Path, near the ATS Center in the Exhibit Hall. Learn more about this group and its many contributions to the Society and its work at: <http://www.thoracic.org/patients/par/>.

Sincerely,

Jess Mandel, MD

DISCLAIMER

The purpose of this guide is to help the American Thoracic Society International Conference attendees navigate the viewing of posters for disorders that typically get less attention at the conference because of their rarity. During abstract submission, authors were instructed to check the box for consideration in the Rare Lung Disease Guide; the abstracts on that list were then further narrowed down. Conditions represented by less than 50 abstracts were considered for inclusion. We regret that not all rare diseases could be represented, and welcome suggestions for additional categories for listing in future editions. Please email us with any suggestions: RLDG@thoracic.org.
